The following contribution was re ceived by the PROSPECTOR. Ita arguments are unaneperable and therefore we cheerfully give it space :-

In 1873 there was not a breath of

suspicion that congress was about to displace silver as a money metal. That act was not petitioned by a single board of trade, chamber of commerce or group of merchants. There never had been any depreciation of silver; and the apparent depreciation was actually but the appreciation of gold, When silver was discarded all debts became payable in gold and the result was that the producer was compelled to give more of the products of his labor to pay his debts. When the war debt was contracted it could have been paid off with one billion bushels of wheat. By the act of 1873 the national debt was increased 50 per cent. As to contract and this in time produced a scarcity of money. In 1872 the silver dollar was worth three cents more than that in a gold dollar, Present depreciation is but gold appreciation. There is no 50-cent dollar, but there is a 200-cent dollar. Take off the dogchain the monopolists have placed around the neck of silver and it will return to a parity with gold. Would free silver expand the currency unduly? In France there is \$27 per capits, and it is the most prosperous country in the world. In the United States we have \$24 per capita and far more labor and industrial disturbances. Will gold go to Europe by coinage? If so currency will contract and eilver will rise to a par with or above gold and gold will be glad to return. Remonetize silver and the flag will be no songer all stars for the money lenders and all stripes for the borrogers.

The National Matte Smelter.

A practical and simple method of matting sulphide ores, such as nickle, copper, gold and silver ores. In localities where lead ores and fuels are scarce and almost unattainable, our pyritic, water jacket Matte Smelter has been recognized with highly satisfactory results, and has been thoroughly tested on various pyratic, sulphide and arsenide ores, in capacity of 2 to 80 tons per day. It is the most practical, cheapest and simplest method of gold and silver ore matting and concentrating that is known

ore matting and concentrating that is known today

It requires no extraordinary skill, no lead ores, no fluxing material, and no fuel of any kind for the smelter atter it is started. The sulphur in the ore is its natural furl only, and its cost has no comparison with any other process of con-
